Essential Fuel and Fluid Advisory Decals

June is a transition month in many areas of life. The end of school - sometimes for the summer and sometimes for life. It's the start of summer vacation for students and of summer trips for the family. It's the beach, the mountains, the road trip anticipated for months and the most popular month for weddings.

It's often the start of some very unwelcome heat and humidity. All that heat and those long sunny summer days can be hard on decals. While summer is the season for getting after all that work, getting contracts fulfilled, and keeping those machines running to do so, it can be easy to overlook the essentials that can cause problems. The harshness of heat and sun can take a toll on critical decals. Ones like "Diesel Fuel" vs "Gasoline", Hydraulic Oil fill location, DEF tank location and other things which would really throw a "wrench" in machine operation if they were confused.

You may not be using as many complete marking or safety decal sets at this time of year, but you certainly want to stay on top of your fluids, grease points, and other advisory decals!

THE M... OFF
